# EdCredible's Value to Instructional Materials Supervisors and District Administrators

o **Defensible:** EdCredible gives instructional materials supervisors and administrators access to vast amounts reviewer score and comment data for evaluations, rankings, and votes. This makes it easy for administrators to access, print or export data that they use to explain and defend their recommendations.

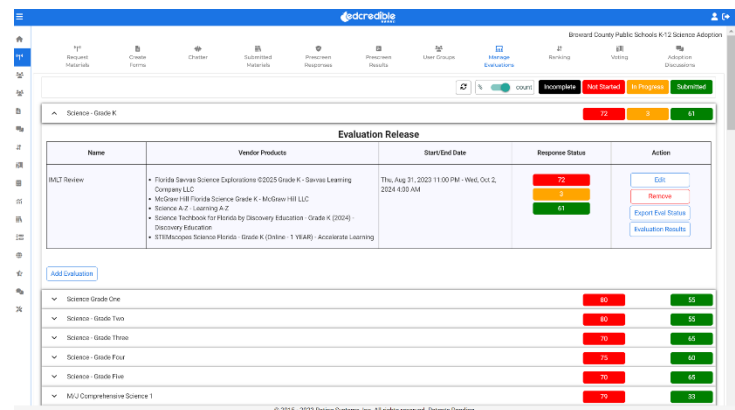

EdCredible does the heavy lifting for administrators by scoring and comparing product evaluation data and comments side-by-side. Administrators don't get data like this, except from EdCredible.

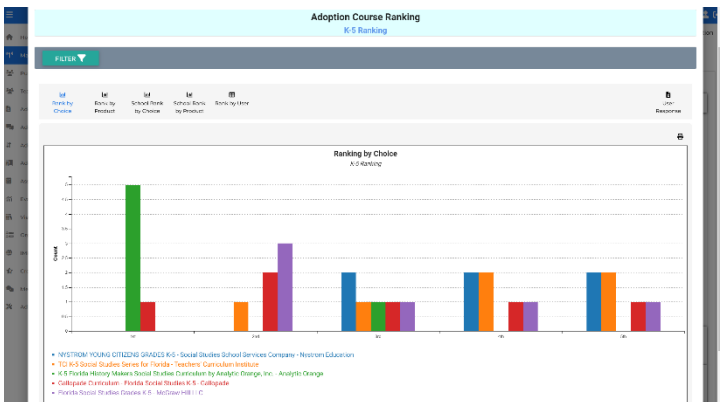

Administrators can communicate with publishers in an easy to use messaging system with the ability to export all communications should it be needed to respond to a public information request.

o **Time & Cost Efficient:** Numerous administrative tasks during an adoption can distract administrators from focusing on the fidelity of the process. However, EdCredible drastically cuts the amount of time consumed so administrators can focus on managing the process and not chasing paper.

Administrators manage and track the progress for all evaluations, ranking and voting through EdCredible.

o **Fidelity & Consistency Across Adoptions:** Staff changes can be a problem for districts and adoptions may rotate amongst content supervisors from one year to the next. EdCredible fixes that because it's easy to use and ensures fidelity across successive adoptions. It also accelerates the learning curve and makes adoption novices look like subject matter experts quickly.

EdCredible's evaluation, ranking and voting analytics make it easy for administrators to see real-time results of all evaluations by user, school, committee and more.
